Near Ikeja Club.
Opposite Computer Village,
Ikeja, Lagos State,
Nigeria.

BASELINE DATA

2024/2025

AFRICAN YOUTH
BASEBALL & SOFTBALL EMPOWERMENT FOUNDATION

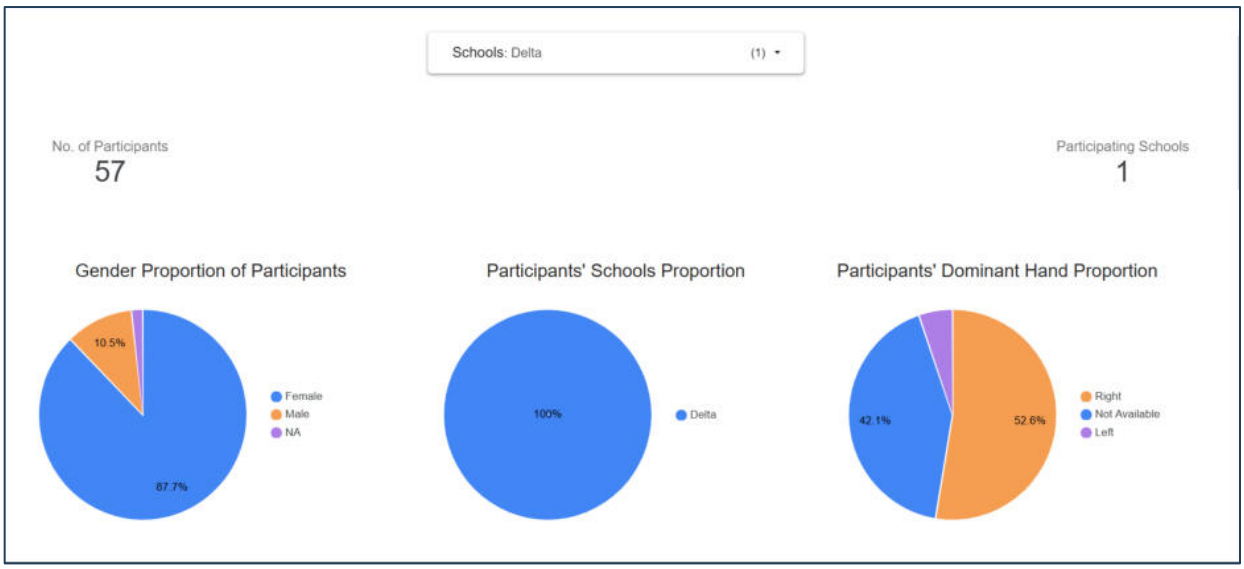
Executive Summary

This analysis revealed distinct profiles for participants from Delta, Federal Staff School, and C&S. Delta School represented the largest contingent, characterized by a predominantly female and young population, with minimal prior team experience and medication use. Federal Staff School, while smaller, also skewed female and young, showing a slightly higher proportion of participants with defined baseball positions. C&S, the smallest group, exhibited a more balanced gender distribution and a notable absence of prior team experience. Across all schools, a significant majority of participants were generally healthy, with most of the participant's not reporting any allergies or medications. Most of the participants did not also specify their player positions and previous teams suggesting a large proportion of new or recreational participants across the board.

Detailed School-Specific Insights

1. **Delta State Schools: The Largest & Predominantly Female Cohort**

- **Participation Scale**: Delta School was the largest contributor, with 57 participants, representing a significant portion of the overall participant pool.
- **Gender Distribution**: This school exhibited a strong female dominance, with 87.7% (50 participants) identifying as Female, compared to 10.5% (6 participants) Male and 1.8% (1 participant) not specifying a gender.
- **Dominant Hand**: The participant group was fairly balanced in dominant hand, with 52.6% (30 participants) Right-handed and 42.1% (24 participants) Left-handed. 5.3% (3 participants) did not specify their dominant hand.



- **Athletic Profile (Player Positions & Previous Teams)**:
    - A striking 93% (53 participants) had no player positions yet, indicating a large number of new players or those not yet assigned specific roles.

- Only a few players were noted in specific roles: Catcher (1), Outfielder/Pitcher (1), Second Base and Right Outfield (1), and Outfield (1).
- Similarly, 96.5% (55 participants) had no previous team records, suggesting a low level of prior organized team experience within this group.
- "Softball" (1) and "Team Delta" (1) were the only recorded previous teams.

- **Health & Wellness (Medications & Allergies):**
  - An exceptionally healthy group, with 100% (57 participants) not taking any medications
  - 86% (49 participants) did not report any allergies.
  - Noted allergies (affecting a small minority) included: Dust/smoke (2), Blood (2), Smoke (1), Tiger Nut (1), Smokes (1), and Onions (1).

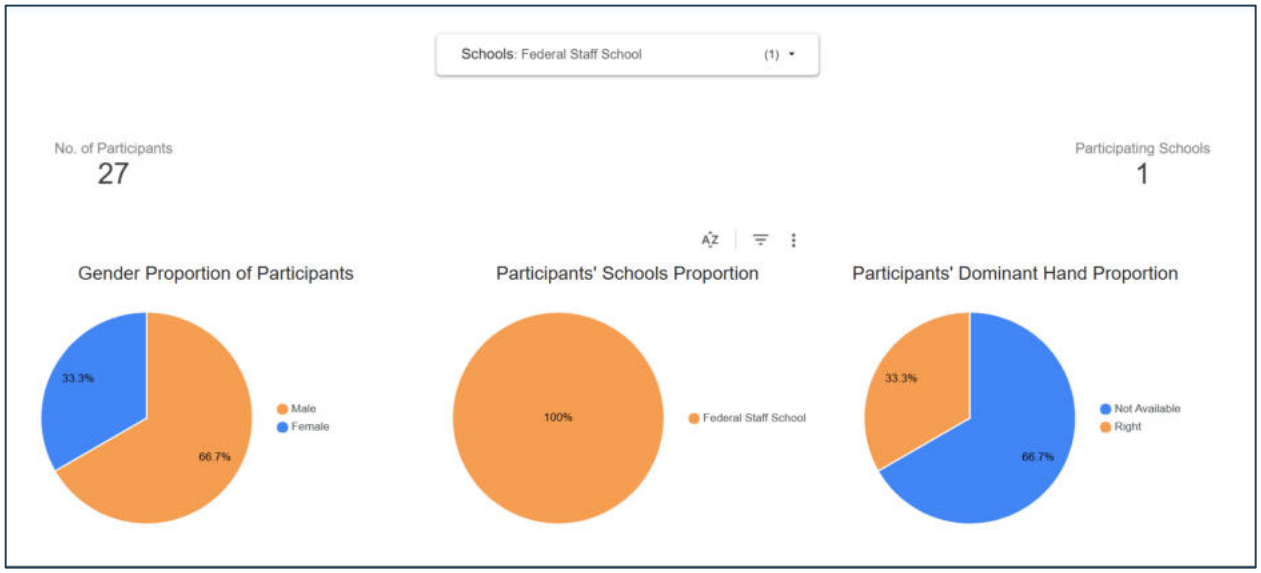
2. **Federal Staff School: The Mid-Sized & Predominantly Right-Handed Cohort**

- **Participation Scale**: Federal Staff School contributed 27 participants.
- **Gender Distribution**: This school also showed a female majority, with 66.7% (18 participants) Female and 33.3% (9 participants) Male.
- **Dominant Hand**: Right-handedness was more pronounced here, with 66.7% (18 participants) Right-handed compared to 33.3% (9 participants) Left-handed.



- **Athletic Profile (Player Positions & Previous Teams)**:
  - 85.2% (23 participants) had no player positions, consistent with the trend of new or unassigned players.
  - Specific positions included Pitcher (2) and Catcher (1).
  - 96.3% (26 participants) did not also have previous team records, reinforcing the notion of limited prior organized team experience.
  - "Lubcon" (1) was the only recorded previous team.

- **Health & Wellness (Medications & Allergies)**:
    - An overwhelming 96.3% (26 participants) were not prescribed any medication, with only one participant using "Erythromycin & Septrin."
    - 77.8% (21 participants) had no allergies.
    - Noted allergies included: Coughing (1), Heat (1), Dust Allergy (1), Egg (1), Dust (1), and Coconut (1).

5.	Egg	1
6.	Dust	1
7.	Coconut	1

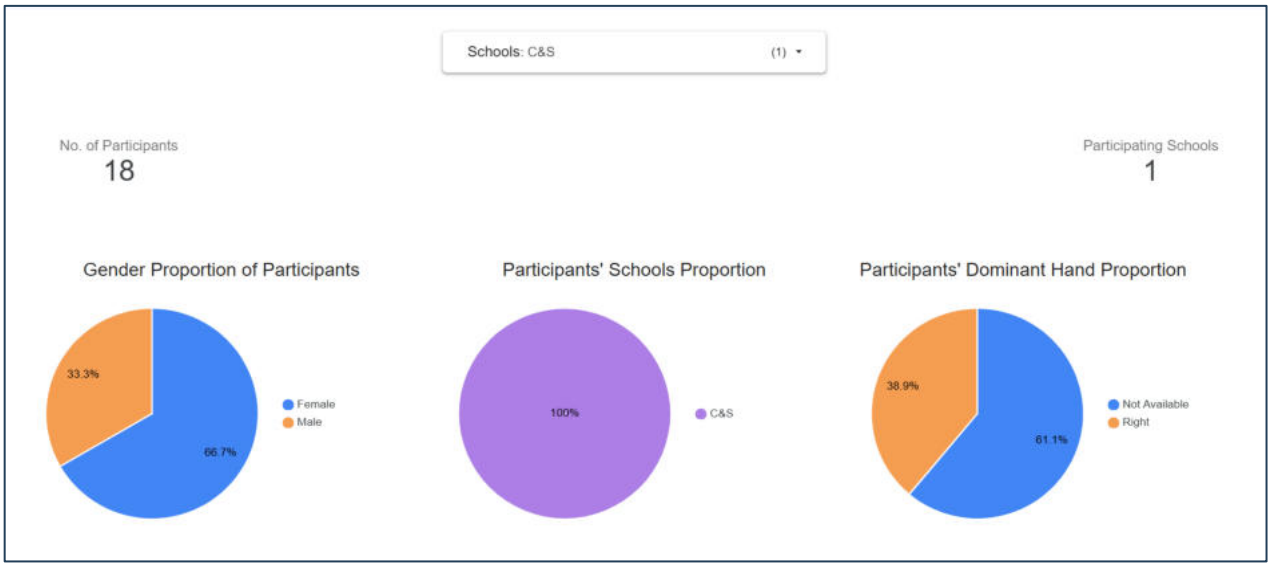
- **Age Profile (Birth Years)**: The primary birth years were 2011 (8 participants) and 2009 (6 participants), suggesting a similar young age demographic to Delta School.

Birth Years of Participants

	Years	No. of Participants
1.	2011	8
2.	2009	6
3.	2010	4
4.	2012	4
5.	2013	2
6.	2008	2
7.	2014	1

3. **C&S School: The Smallest & Newer Participant Group**

- **Participation Scale:** C&S School had the smallest cohort, with 18 participants.
- **Gender Distribution**: This school presented a relatively more balanced gender ratio compared to Delta, with 66.7% (12 participants) Female and 33.3% (6 participants) Male.
- **Dominant Hand**: Right-handed individuals were dominant at 61.1% (11 participants), with 38.9% (7 participants) Left-handed.



- **Athletic Profile (Player Positions & Previous Teams)**:
  - 33.3% (6 participants) had no player positions, which was notably lower than the other schools, indicating a higher proportion of participants with defined roles.
  - More varied positions were recorded: Outfield (3), Second Base (3), Pitcher (2), Catcher (2), Infield (1), and Third Base (1).
  - 100% (18 participants) had no previous team records, suggesting this group consisted entirely of new or first-time organized participants.
- **Health & Wellness (Medications & Allergies)**:
  - 100% (18 participants) were not under any medications, indicating a healthy participant base.
  - 61.1% (11 participants) had no allergies.
  - Noted allergies were: Heat (2), Pepper (1), Fracture (1), Drug Allergy (1), Yarn (1), and Beans (1). The "Fracture" and "Drug Allergy" entries were unusual for an "Allergies" field and might require clarification.

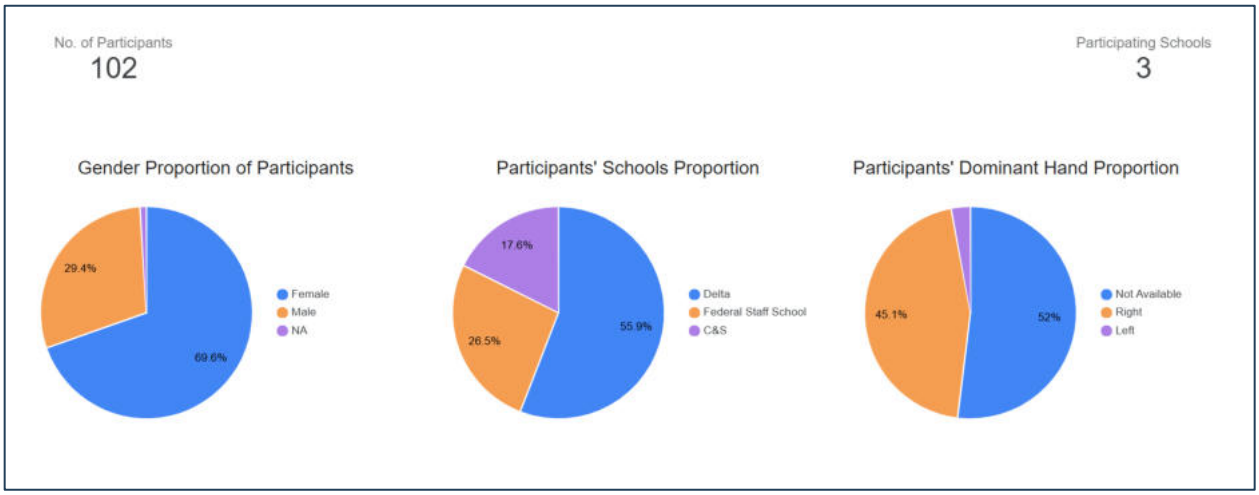
3.	2010	3
4.	2013	1
5.	2009	1

Overall Participation & Demographics

- **Total Participants**: A total of 102 participants was recorded
- **Participating Schools**: Participants originated from 3 distinct schools:
  - 55.9% (57 participants) were from Delta School.
  - 26.5% (27 participants) were from Federal Staff School.
  - 17.6% (18 participants) were from C&S School.
- **Gender Proportion**:

- 69.6% (71 participants) were Female.
- 29.4% (30 participants) were Male.
- 1.0% (1 participant) did not state this information

- **Participants' Dominant Hand Proportion**:
  - 52.0% (53 participants) were Right-handed.
  - 45.1% (46 participants) were Left-handed.
  - 2.9% (3 participants) did not specify this information



- **Player Positions**:
  - A significant majority, 80.4% (82 participants), had no player positions, indicating a high proportion of new or unassigned players.
  - The most frequently specified positions were Third Base, Catcher, Pitcher, Outfield, and Second Base, each with 3 participants. Infield had 1 participant.
- **Previous Team Records**:
  - 97.1% (99 participants) had no previous team records, reinforcing the observation of a largely new participant base.
  - "Lubcon", "Softball", and "Team Delta" each had 1 participant with prior team experience.
- **Medications Being Used by Players**:
  - 99.0% (101 participants) reported no medication usage, suggesting excellent overall health.
  - Only 1 participant was noted as using "Erythromycin & Septrin."
- **Participants' Allergies Records**:

- 79.4% (81 participants) reported no allergies.
- The most common specific allergy was "Heat" (3 participants), followed by "Dust/smoke" and "Blood" (2 participants each).
- Other less frequent allergies (1 participant each) included: Coughing, Food Allergy, Egg, Dust, Coconut, Pepper, and Fracture.

Overall Age Profile

- Birth Years of Participants:
  - The most common birth year was 2011 (34 participants), followed by 2012 (23 participants) and 2010 (17 participants). This indicated a predominantly young participant demographic.
  - A decreasing trend was observed for older birth years, with 2007 having only 1 participant.
  - Two participants had 'null' values for their birth years, suggesting minor data completeness issues.

Birth Years of Participants

	Years	No. of Participants

6.	2014	4
7.	2008	4
8.	null	2
9.	2007	1

Comparative Analysis & Key Takeaways

- **Participation Scale**: Delta was the largest, followed by Federal Staff, and then C&S.
- **Gender Skew**: All three schools showed a female majority, with Delta having the highest proportion (87.7%). This highlighted a strong female engagement in the program.
- **New Participants**: A significant overarching theme was the overwhelming proportion of participants without player positions and previous teams across all schools. This strongly suggested that a large majority of these participants were new to organized baseball/sports, or their roles were yet to be defined. C&S, however, showed a relatively higher proportion of defined positions.
- **Health**: Participants across all schools were largely healthy, with minimal medication use and a high percentage not reporting any allergy. The specific listed allergies varied by school.
- **Age Profile**: The data consistently pointed to a young participant demographic, with birth years predominantly in the 2010s (2011, 2012, 2010 being most common).
